

THE EASY, RELIABLE WAY TO MEET THE CHALLENGES OF PROVIDING OXYGEN THERAPY.

Walk-O₂-Bout® all-in-one lightweight oxygen cylinders from Airgas Puritan Medical: easy to carry, easy to handle, and easy to use.

Your team needs a safe, reliable way to give patients oxygen therapy with an oxygen delivery system that's both simple to use and easy to transport.

Airgas Puritan Medical has the solution.

Walk-O₂-Bout® portable, lightweight oxygen cylinders feature wide handles that make them easy to lift and carry anywhere. The built-in regulator means you never have to search for a missing regulator. And the oxygen outlet port can be fixed, or optionally swivel a full 180° for increased range of movement and comfort. The streamlined Walk-O₂-Bout design packs everything you need into one integrated easy-to-carry unit.

Walk-O₂-Bout is available in four unique models:

Walk-O₂-Bout® Oxygen, Walk-O₂-Bout® Pediatric Flow with settings of 0-4 lpm, and **Walk-O₂-Bout® MRI Compatible** with non-magnetic parts, aluminum cylinder and an MRI-compatible regulator head – making it a *certified MRI-compatible portable oxygen system*. **Walk-O₂-Bout® for First Responders** features short handles for use in tight quarters.

Now, treating patients with oxygen has never been easier – or easier on your bottom line. To learn more about Walk-O₂-Bout, call Airgas Puritan Medical at 1-866-712-4003 today or visit www.airgas.com.

You'll find it with us.™
